ONPOINT
HEALTH DATA

Dynamic Reporting & Data Access Solutions.

Onpoint's delivery of transformative analytic solutions began in the 1970s with our ground-breaking work on regional variation in care and cost. More than 50 years later, we continue to provide our clients with independent, reliable, and innovative analysis and reporting. Our data access and analytics platform, Data Navigator, puts powerful data sets in the hands of analysts using a series of modules – from dynamic dashboards to direct access environments and on-demand reporting and visualizations – to support informed policy decisions and advanced analytics.

A PLATFORM TO POWER ADVANCED ANALYTICS

Onpoint regularly delivers enriched data sets – standard, curated, ad hoc, and more – to our clients and their approved end users. While these data sets can be delivered via dedicated SFTP/API connections, we also offer a secure online platform that provides role-based data access and industry-leading analytic tools for powerful exploration and analysis.

DataNavigator

This data access and reporting platform – Data Navigator – enables our clients' credentialed users to explore enriched data sets using leading software packages such as Python, R, SAS, Stata, Tableau, and more. From pre-built reports to dynamic dashboards to AI-assisted querying and visualizations, Data Navigator offers myriad ways to dive into the data and answer complex questions.

A SAFE & SECURE SOLUTION FOR EXPLORATION

Information security and privacy are core to all Onpoint solutions. Data Navigator is hosted in a FedRAMP-compliant, SOC 2-certified cloud environment with end-to-end encryption, advanced threat detection, and 24/7 monitoring. Both Data Navigator and its sister data management platform, Data Harbor, adhere to the highest standards of healthcare data security and privacy, including HIPAA, NIST, and HITRUST.

A MODULAR APPROACH FOR MAXIMUM FLEXIBILITY

Data Navigator features a series of reporting modules that can be activated based on each client's needs and interests. Modules include:

- **Dynamic Insights.** Dive into a series of dynamic dashboards for fast takeaways across common areas of analytic interest.
- **Analytic Enclave.** Access enriched data sets and advanced querying and visualization tools for self-directed analyses.
- **Beacon AI.** Explore the data with our artificial-intelligence assistant for instant answers and related data visualizations.
- **Provider Directory.** Get a clearer picture of the complex relationships between patients, providers, practices, and organizations.

DIVING DEEPER INTO DATA NAVIGATOR'S AVAILABLE MODULES

Data Navigator's reporting modules offer multiple pathways into the same synchronous and regularly refreshed data warehouse. This ensures that analytic results remain consistent across all available tools for maximum comparability and end-user trust.

Data Navigator's access and reporting modules have been carefully designed to support all types of reporting needs – from quick KPIs for executive insights to self-paced, user-directed deep dives into the data. Additional detail on each of the modules includes:

- **Dynamic Insights** serves as the anchor for the Data Navigator platform, transforming complex healthcare data into dynamic dashboards that help users easily explore trends, monitor changes, and identify opportunities. Its configurable filters deliver actionable insights for leadership, analysts, and program teams alike.
- The **Analytic Enclave** offers a secure, cloud-based workspace where approved users can work directly with standard and curated data sets using Python, R, SAS, SQL, and other tools. Analysts can build code, run queries, save results, and collaborate across teams – all with role-based permissions, administrative controls, and 24/7 support.
- Our **Beacon AI** assistant quickly answers users' plain-language questions, offering detailed written responses alongside customized charts, tables, summaries, and supporting query logic – all in mere seconds. Beacon AI operates within human-curated guardrails to maintain transparency, security, and ethical governance.
- The **Provider Directory** offers clear reporting on the relationships between providers, practices, and organizations through a single, searchable source of truth. With rich entity resolution and relationship mapping, it supports network analysis, transparency reporting, and accurate, provider-based cost and quality comparisons.

DELIVERING COMPREHENSIVE END-USER SUPPORT

Onpoint's Data Navigator platform also provides comprehensive training and orientation tools so users can be productive from Day One. Standard training materials available within Data Navigator's embedded training module include:

- Guided demonstrations of Data Navigator's available modules, related tools, data structures, and workflows
- Role-specific onboarding for analysts, administrators, and technical users
- Video-based training modules
- Detailed documentation, including user guides, data dictionaries, and FAQs

For additional support, clients and their end users have 24/7 access to Onpoint's Help Center, our online support platform that automatically triages requests to the appropriate Onpoint team to expedite resolution for optimized customer service.

ABOUT ONPOINT HEALTH DATA

Onpoint Health Data is a nonprofit organization that specializes in collecting, integrating, and analyzing health data to provide our clients with enriched data sets and innovative analytic solutions tailored to their specific needs.

We are an independent, nonpartisan organization supporting federal, state, and regional health improvement initiatives for more than 50 years.
